

# KEEPS DOOR SECURE

## BLOCKIT & LOCKIT® GUARD

## PORTABLE DOOR GUARD WITH SIREN ALARM

### PROTECTING YOU AND YOUR FAMILY AT HOME, SCHOOL OR WHEN TRAVELING JUST GOT A LOT EASIER AND MORE EFFECTIVE.

Blockit & Lockit Systems of Billings, Montana has introduced a new, advance portable door guard with siren alarm called the Blockit & Lockit Guard Dog.

According to the Department of Justice residents of the United States experience approximately 25-million crimes "yearly". Nearly 19-million of these crimes were property crimes (burglary and theft) and more than 60% were not reported to the Police.

Americans are looking for better ways to protect themselves, their families and homes from burglary, theft and unwanted intrusions. Blockit & Lockit founders, Harvey Markegard and Joseph Higgins believe their company's integration of physical and electronic security is the product solution Americans have been searching for to protect themselves, their families and homes.

Designed and engineered by Markegard, formerly a Product Designer with Ford Motor Company, the Blockit & Lockit Guard Dog has attracted the attention of national and international retailers including shopping networks, catalog companies, hardware, home & garden, security and specialty retailers.

The Blockit & Lockit Guard Dog is an innovative portable door guard with siren alarm using the shock-corded design of a blind-persons cane. It snaps together in seconds and can be unfolded for storage in a purse, briefcase or backpack when traveling.

The 9-volt battery of the Blockit & Lockit Guard Dog powers the 120-decibel siren alarm that sounds when the Motion Sensor detects unauthorized activity. The motion sensor can be set to High or Low sensitivity and the ON and OFF switch prevents accidental sounding. The user would choose High sensitivity when at home or in a motel room alone and they want to sleep or bathe safely and securely. Low sensitivity can be used when children are playing in the home.

The Blockit & Lockit Guard Dog is made of Structural Resin, with Steel Leg that prevents the door from opening and Non-Skid Foot that grips most floor surfaces. The product comes with two length adjusters that are used to increase the length of the leg to fit tall handled door.

The Blockit & Lockit Guard Dog packaging graphics demonstrate How to use, Where to use, Who can use and Why use the Blockit & Lockit Guard Dog.

To Install – unfold the Blockit & Lockit Guard Dog and it will snap together. Open handle and place between door handle and floor. Push handle closed for tight fit. Move ON & OFF switch to High or Low. Wait for the beep. You siren door guard with siren alarm has been activated.

To Remove – move (RED) switch to OFF position. Open handle and remove from door handle. Pull steel leg sections apart, fold and secure with storage strap. Store the Blockit & Lockit Guard Dog in its storage bag.

The Blockit & Lockit Guard Dog can be used by seniors, singles, couples, students and travelers as their personal portable security and alarm system. The Blockit & Lockit Guard Dog Integration of high-tech electronics with low-tech steel barrier, controls access and insures detection of potential threats before they can affect you at home or when traveling. Use the Blockit & Lockit Guard Dog at home to complement a hard-wired indoor security sensor system.
